

Human Givens

Helping people thrive

‘Human Givens’ is a practical, holistic and evidence-based approach focusing on what individuals need to live mentally healthy and fulfilling lives.

The approach was developed over 20 years ago by two psychotherapists who wanted to bring greater clarity and understanding to the field of mental health and to make the way people are helped safer and much more reliably effective. Drawing on the latest neuroscientific and psychological research, plus new insights of its own, it combines this knowledge with proven therapeutic techniques from a wide range of approaches to provide highly effective interventions.¹

At its heart is the understanding that we are all born with essential physical and emotional needs and, if we are born healthy, the innate ‘resources’ to help us get those needs met. These are the human ‘givens’ – the ingredients for wellbeing. If our needs aren’t being met well enough in our lives, or we are misusing our resources, we suffer considerable emotional distress and become vulnerable to developing mental health problems.
